

Velos Investigational Drug System

Product Line

- Velos eResearch
- Velos Stafa
- Velos Investigational Drug System
- Velos Volunteer
- Velos eSample
- Velos Cardio
- Velos Transplant
- Velos Renal
- Velos eTools
- Velos Integration Engine

Research institutions are required to handle a growing number of studies, resulting in an increased number of investigational drugs that need to be managed by their pharmacies. The numerous inventory transactions done with a drug must be tracked along with the resulting balance. The current system used in many pharmacies requires the manual entry and tracking of a drug and the movement of its units. This process is time-consuming, labor-intensive, and increases the chances for human error and miscalculations.

Improving Pharmaceutical Inventory Management and Accountability

Developed in collaboration with investigational pharmacists at a top cancer center, the Velos Investigational Drug System increases accuracy and efficiency in clinical trial pharmacy inventory management. The system integrates with enterprise clinical trial management systems (CTMS) and pharmacy systems to eliminate the significant double entry of data related to patients and protocols, thus reducing the associated risk of entry errors. Velos tracks the inventory at multiple pharmacies, providing users with the ability to log into satellites as well. Pharmacists and technicians can also track the most common drug transactions, adjusting each pharmacy's inventory levels accordingly. This limits the amount of manual entry required, increasing productivity and lowering cost.

Features

- Monitors Receive, Transfer, Dispense, Return to Supplier, Destroy, and Adjustment transactions
- Manages a comprehensive drug catalog, protocols, patients, suppliers, and organizations
- Generates accountability logs exportable to NCI DARF, NCI ORAL DRAF, ACTG, De-Identified and other format, significantly facilitating the audit process
- Granular inventory tracking down to an individual Bottle #, Vial #, Kit #, or Unit ID
- Patient-specific drug tracking and double-signature verification
- Barcoded inventory labels

Velos Investigational Drug System

Product Line

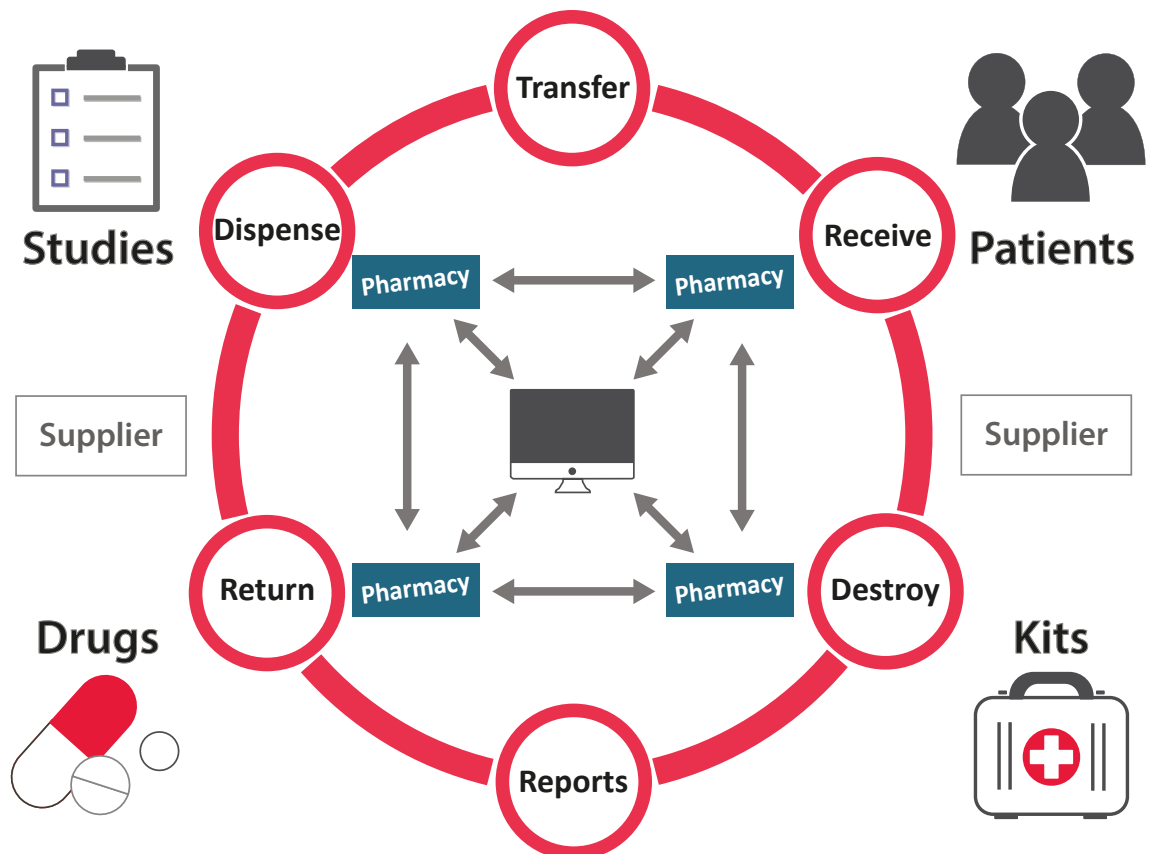

- Velos eResearch
- Velos Stafa
- Velos Investigational Drug System
- Velos Volunteer
- Velos eSample
- Velos Cardio
- Velos Transplant
- Velos Renal
- Velos eTools
- Velos Integration Engine

Interface Solutions

- Operates as a standalone system but has interfaces available to reduce data entry
- Velos eResearch (expandable to other CTMS systems) for protocol and patient management
- Inpatient or outpatient pharmacy systems for deducting inventory and logging dispenses
- Carousels for inventory movement between locations

Benefits

- Comprehensive coverage of all inventory transactions performed with investigational drugs
- Ensures dispensing accuracy by tracking a patient's dispensing history
- Fully HIPAA and 21 CFR Part 11 compliant (including audit trail logging)
- Minimizes workflow errors with role-based access rights
- Supports multi-site pharmacy systems
- Print patient labels and record inventory deduction on logs in a single dispense transaction
